Evolving uses of technology in Nunavut research practice

Are you a physical, health and/or social scientist who uses technologies to collaborate, conduct, and report on your research? If so, we want to learn from you!

Project Overview

For years we have heard community concerns related to research in Nunavut, and the need to improve consultation and engagement of Nunavummiut in research processes. The use of technology in the practice of research has been growing recently, and can affect research relationships, methods, and communication.

To gain insights on uses of technology in research, I would like to interview researchers who have held the most research licenses in Nunavut over the years in their respective discipline.

The goal is to understand what technologies researchers are using to collaborate, conduct, and report on their research.

You are invited to participate in an interview (1 to 2 hours) to discuss the technologies you have used in your research and how they have evolved over time.

See next page for details.

Objectives

1. Identify communication technologies used by researchers to collaborate with community partners;
2. Characterize technologies used to conduct research in field- or community-based research;
3. Describe technologies used for reporting results and knowledge mobilization;
4. Examine the infrastructure and accessibility factors affecting researcher choice of technologies;
5. Assess how technologies in Nunavut have changed over time; and,
6. Explore objectives 1-5 through the lens of each scientific discipline (physical, health and social science).
Interested in setting up an interview?

- If you are interested in setting up an interview, please:
  - **Respond to the email** you received from Stuart Anderson (anders36@mcmaster.ca) to indicate your interest in participating
  - **Indicate your preferred platform** for a video call (MS Teams, Zoom, etc.) or phone call
  - **Provide your availability** for when is a good time to schedule the interview
  - **Check your email** for the confirmed interview time and connection link (or phone number)
  - **At the time of the interview, be ready** in a comfortable, quiet location with your computer or phone
