And 81 Arviarmiut who asked to remain anonymous.

This project was funded by ArcticNet, the Climate Change Preparedness in the North Program (CIRNAC), the Canada Research Chairs program, and Environment and Climate Change Canada (ECCC) Science and Technology Branch. This project was also endorsed as part of the Year of Polar Prediction.

We received tremendous support from our research partners at SmartICE, Arctic Eider Society, Ittaq Heritage and Research Centre, Environment and Climate Change Canada, Carleton University, Memorial University of Newfoundland, and University of Ottawa. We would especially like to thank Aqqiumavvik Society staff in Arviat for their support in coordinating survey activities across Nunavut.

ABOUT THIS PROJECT

Our research team includes Inuit, northern, and southern researchers who have worked together for many years in Nunavut communities. Over the years we have heard that services providing information on weather, water, and ice conditions are not easy to use, access, or understand. We have also heard that the information is not always accurate for local conditions. We developed this project to learn how Nunavummiut (people of Nunavut) are using environmental information to make decisions about safe travel on the land (including water and ice).

Our goal is to help improve the information that is available, and how it is communicated in northern communities. To accomplish this goal, we created a survey to get feedback from communities across Nunavut. Survey questions were developed together with input from all team members, as well as from environmental service providers, Inuit organizations, and northern governments and research organizations.

We work together according to the Aajiiqatigingniq research framework, outlined by the Aqqiumavvik Society working with Elders from across Nunavut. This framework guides how we make decisions, and build consensus on our research approach and results. Surveys were facilitated by Local Research Coordinators working in their home communities. We also worked together to interpret survey results and decide on key messages for service providers and for Nunavut communities.

Ultimately, we hope that the results of this project will help service providers and decision-makers make their information more relevant and accurate for Nunavummiut, in support of safe travel.

KEY PROJECT ACTIVITIES (2018 - 2022)

Timeline	Activities
December 2018	• **collaborative project planning** meeting at ArcticNet conference in Ottawa, Ontario
January - November 2019	• **collaborative survey development** (involving our project proposal team, Local Research Coordinators, and a number of external reviewers) ◦ this led to survey questions, wording, and options that were much more clear, relevant, and accessible for Nunavummiut ◦ it also means results can be more meaningful and impactful to researchers, northerners, and policy-makers
October - November 2019	• **training sessions with Local Research Coordinators** near Montreal, Quebec and in Iqaluit, Nunavut
December 2019 - March 2020	• **Local Research Coordinators facilitated surveys** in their home communities
March 2020	• **surveys put on hold due to the COVID-19 pandemic (see page 5 for more details)** ◦ we started working together on a plan for how to safely continue the project
June 2021	• **Local Research Coordinators restarted survey facilitation** ◦ this could only happen after public health and research license/ethics restrictions allowed it, and with local community organizations' support ◦ Local Research Coordinators also followed up with some earlier participants to clarify answers
October 2021	• **collaborative analysis workshop** in Arviat, Nunavut
November 2022	• **Local Research Coordinators stopped facilitating surveys** in their home communities
December 2022	• **collaborative analysis workshop** in Paris, Ontario, • presentations of refined results at ArcticNet conference in Toronto, Ontario

SURVEY FACILITATION BY LOCAL RESEARCH COORDINATORS

In total, **19 Local Research Coordinators** were involved in the project, and they completed **360 surveys** across **8 communities** in Nunavut.

Local Research Coordinators invited community members to participate based on certain criteria. Specifically, we wanted to learn about uses and needs of weather, water, ice, and climate information and services from community members who were actively travelling on the land (including water and ice) in the last three years (since 2017). This included men and women of all ages and experience levels, and they could be experienced hunters, seasonal travellers, or people who just like to get out on the land.

Local Research Coordinators facilitated the surveys in English or Inuktut based on participant preference. They used Qualtrics survey software to enter responses on iPads. They facilitated the survey in a community office or in participants' homes, based on individual comfort level. Some participants did the survey on their own using an online survey link, when COVID-19 pandemic public health restrictions prevented in-person surveys. Participants were compensated for their time. We obtained research ethics and license approvals before we started the survey.

For this report, we present the results based on survey answers from a total of 115 Arviarmiut = 100%.

For more information about this report and the larger study please contact:

UNDERSTANDING THE NUMBERS IN THIS REPORT

PERCENT

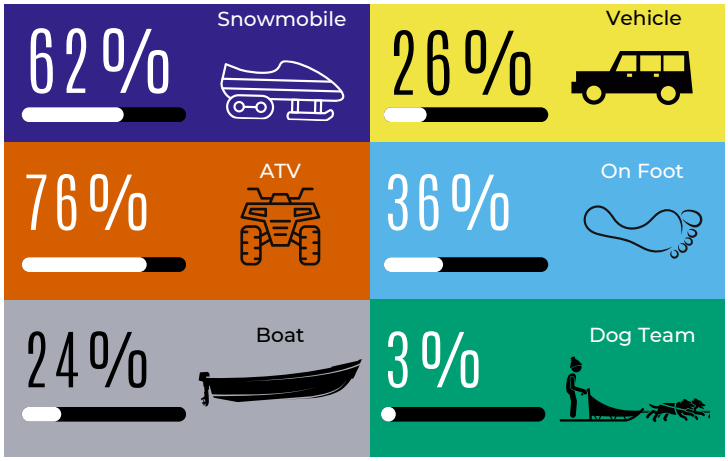
100% = all 115 participants

Most of the survey results in this report are shown as % (percent) where 100% means all 115 participants in Arviat who completed the survey.

Sometimes participants could choose more than one answer, so totals in some figures don't add to 100%.

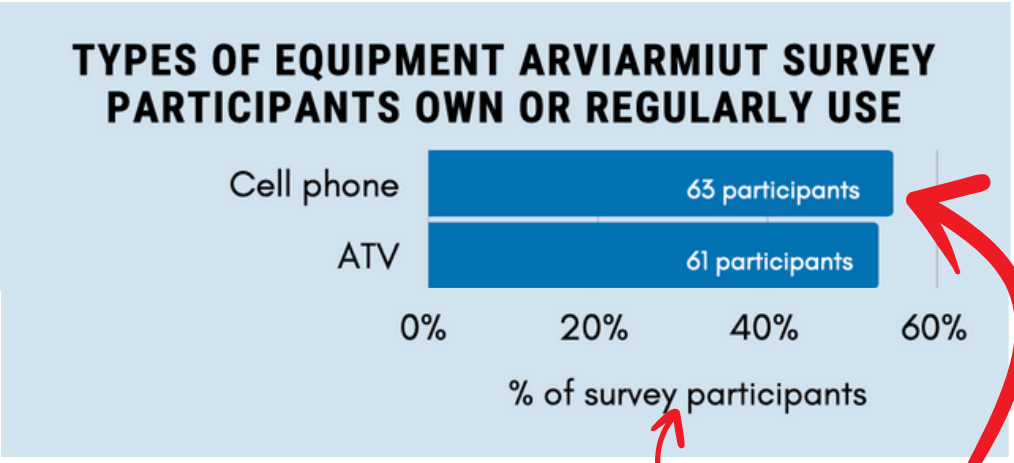
In this example **from p. 16**, participants could choose more than one method of transportation.

METHODS OF TRANSPORTATION SURVEY PARTICIPANTS USE TO TRAVEL ON THE LAND



COUNTS

Count = the number of participants giving that answer



Some of the charts show the results in percent and the **count** (actual number) of participants who gave that answer.
In this example **from p. 15**, cell phones are owned or regularly used by 55% of participants (63 participants).

UNDERSTANDING THE NUMBERS IN THIS REPORT (CONTINUED)

PARTICIPANTS

Participants = everyone (all 115 people) who did this survey in Arviat

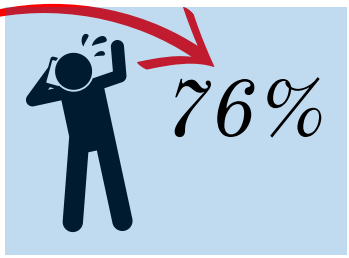
RESPONDENTS

Respondents = only the participants who answered follow-up questions

There are some questions in the survey that not everyone answered. Participants who answered "no" to a question would skip to the next section. But participants who answered "yes" to the same question would be asked some *related follow-up questions*. When we show the results to follow-up questions, we call this group of participants "**respondents",** because they were the ones who answered the question.

CONTACTING OTHERS FOR HELP

In this example **from p. 29**, 76% of the participants said "yes I can call for help if I get stranded on the land".



If Arviarmiut ***participants*** get stranded or have an accident on the land, 76% (out of a total of 115) can call for help.

Of the 87 ***respondents*** who can call for help, most would call a **family member** (91%), or **local search and rescue** (56%), and some would call **a friend** (45%) for help.

Only the participants who said "*Yes, I can call for help*", were asked the follow-up question, "*Who, can you call for help*?" This smaller group of participants who answered the follow-up question are called **respondents**. So the percent shown for respondents are out of the total who answered the question, and not the total of participants.

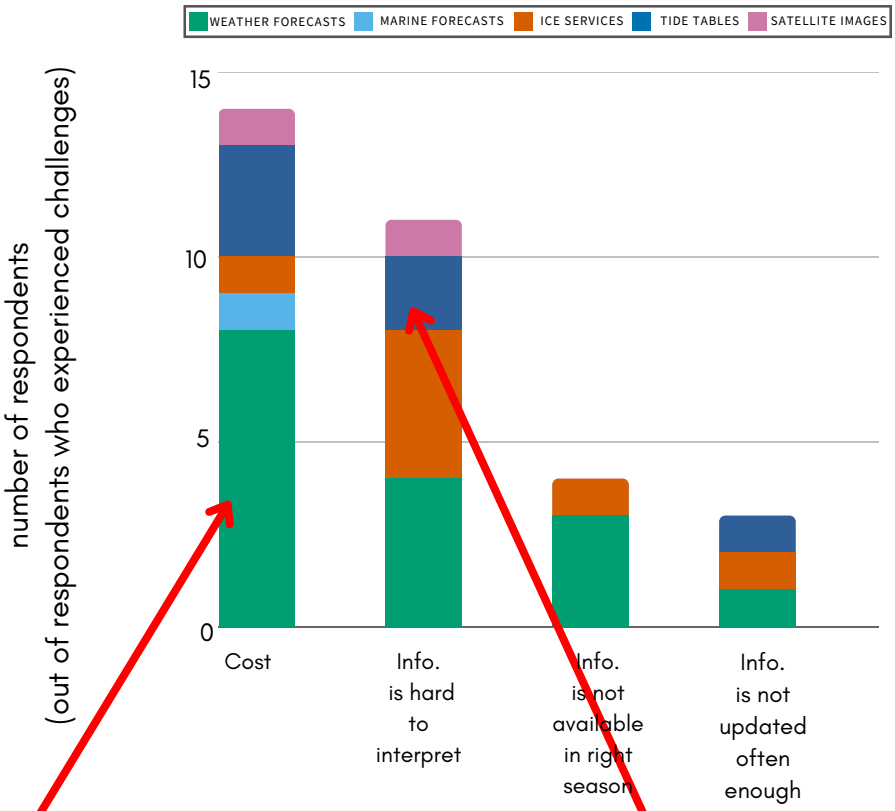
RESPONDENTS

Respondents = only the participants who use forecasting products

REASONS WHY ENVIRONMENTAL FORECASTING INFORMATION IS DIFFICULT FOR ARVIARMIUT RESPONDENTS TO ACCESS



Some participants did not use every type of environmental forecasting information (i.e. weather forecasts, marine forecasts, ice services, tide tables, satellite images).

In this example from **p. 40**, of the respondents who said "*Yes, I experience challenges when accessing weather forecasts*",

8 of them experience challenges due to cost. Of the respondents who said "*Yes, I experience challenges when accessing tide tables*", 2 of them experience challenges because the information is hard to interpret.

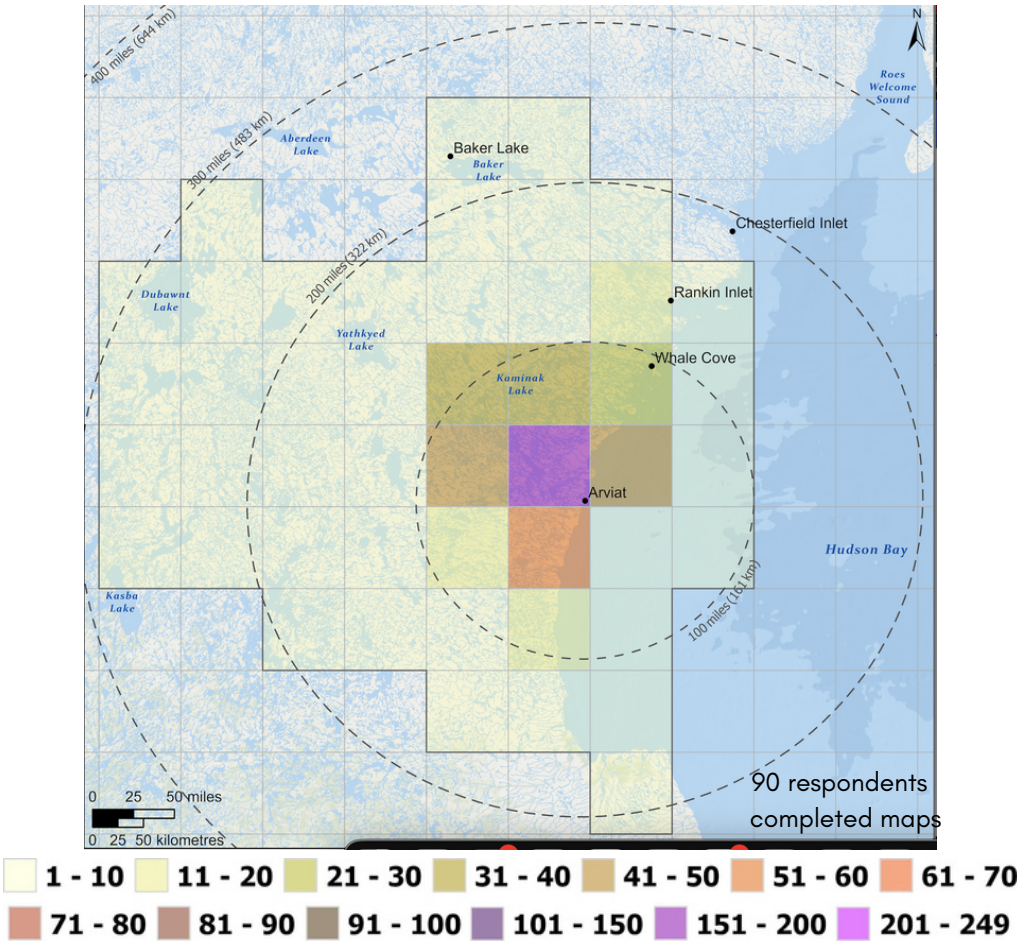
UNDERSTANDING THE MAPS IN THIS REPORT

TOTAL TRAVEL



Number of respondents who travelled in the selected area

MAP COLOURS AND LEGENDS

Each coloured box on the maps represents a certain number of respondents who travelled to that area, and all of the types of transportation they used to travel there (e.g. if a respondent went to an area by ATV and by snowmobile, it is counted as having travelled to the area twice).

Darker/brighter colours = more respondents went there.
Lighter colours = less respondents went there.

Respondents = only the participants who completed maps
Some participants did not complete travel maps (due to technical issues and other reasons). When we show the maps, we call this group of participants "respondents", because they were the ones who completed maps.

ARVIARMIUT PARTICIPANT DEMOGRAPHICS (CONTINUED)

LANGUAGES SPOKEN*

81% of participants speak English

100% of participants speak Inuktitut

1% of participants speak French

*Participants could choose multiple languages

Participants were asked about which languages they speak.

Most participants speak English (81%) and all speak Inuktitut. Very few, speak French (1%).

It is important to understand how long participants have lived in Arviat as this relates to (although does not necessarily determine) how much experience they have with travel on the land, water, or ice.

Most participants (80%) have lived in Arviat for 20 or more years.

OF PARTICIPANTS HAVE ACCESS TO THE INTERNET IN THEIR HOME

Cell phones and ATVs are the types of equipment most often owned or regularly used by participants, followed by snowmobiles. Participants who answered "Other" use a fish finder (Humminbird), maps, mini-side-by-side, scooter, and their legs.

Most (71%) participants have access to the internet in their home. This is important to know because it affects what kinds of environmental forecast information they might be able to access.

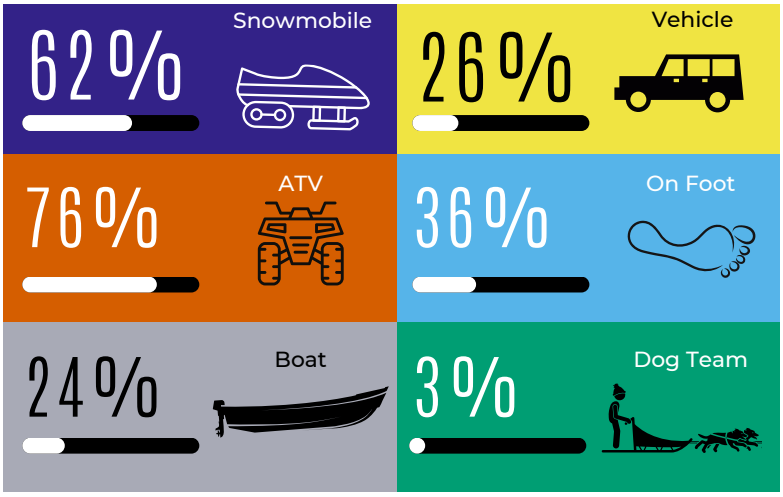
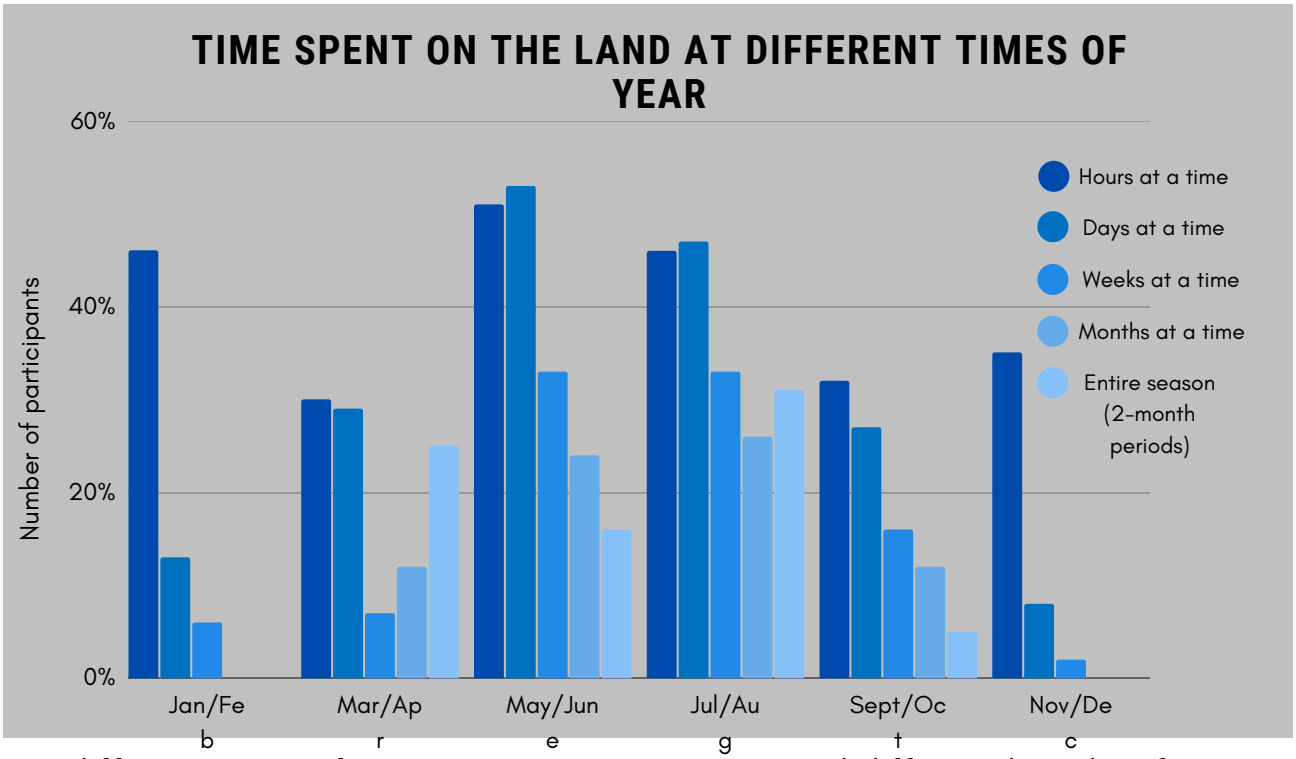
TRAVEL HABITS

METHODS OF TRANSPORTATION SURVEY PARTICIPANTS USE TO TRAVEL ON THE LAND



When survey participants travel on the land, ATV is the most common method of transportation used, followed by snowmobile and vehicle. Participants also travel by boat, on foot, and by dog team.

Survey participants use different types of transportation at different times of year. ATVs are used all through the year. Snowmobiles are used from November through June. Boats are used from May through October.



In different times of year, survey participants spend different lengths of time on the land. Most commonly, participants are on the land for hours or days at a time. In May through August the number of participants that are out on the land for weeks at a time, increases. Some travel for longer periods of time.

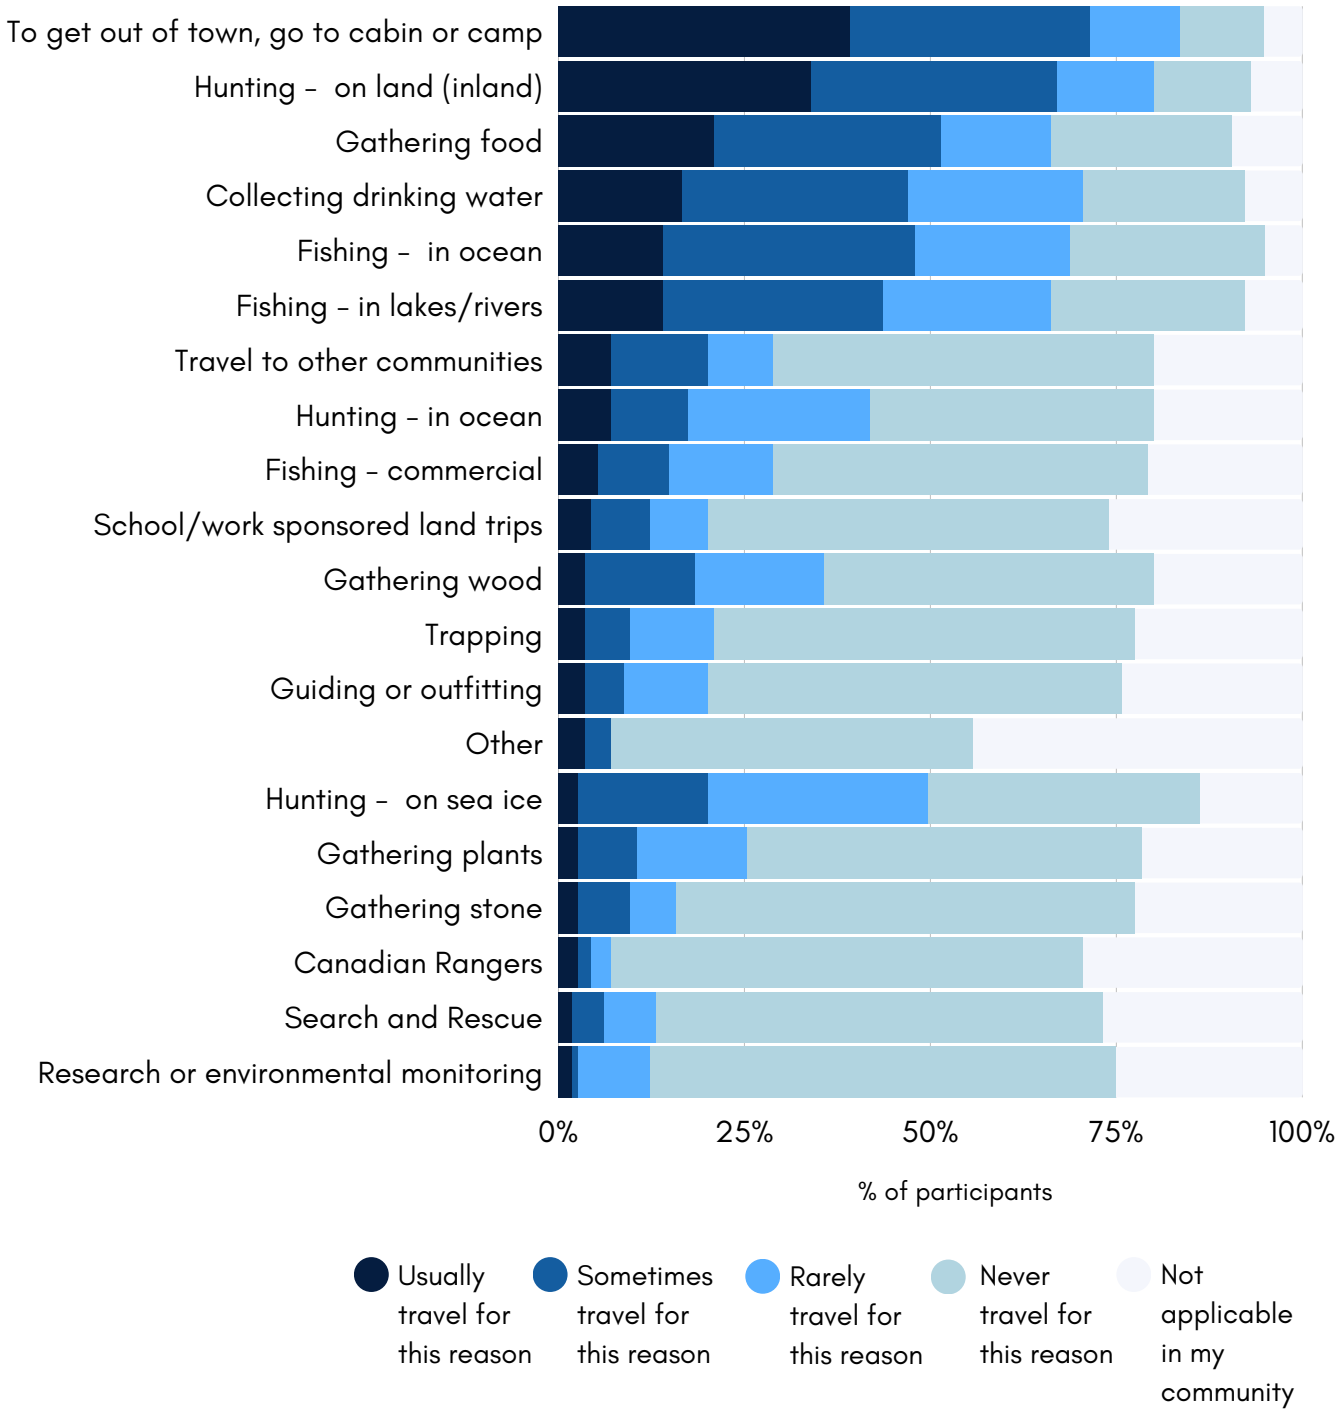
TRAVEL HABITS

REASONS ARVIARMIUT PARTICIPANTS USUALLY TRAVEL ON THE LAND



Survey participants travel on the land, water, and ice for many reasons. Most often they travel to get out of town/go to a cabin or camp, hunt on land (inland), gather food, collect drinking water, fish in the ocean, and fish in lakes and rivers. Participants who answered "Other" said they travel to butcher seals, to cache fuel, for family reunions, sport fishing, wildlife surveys, and church trips.

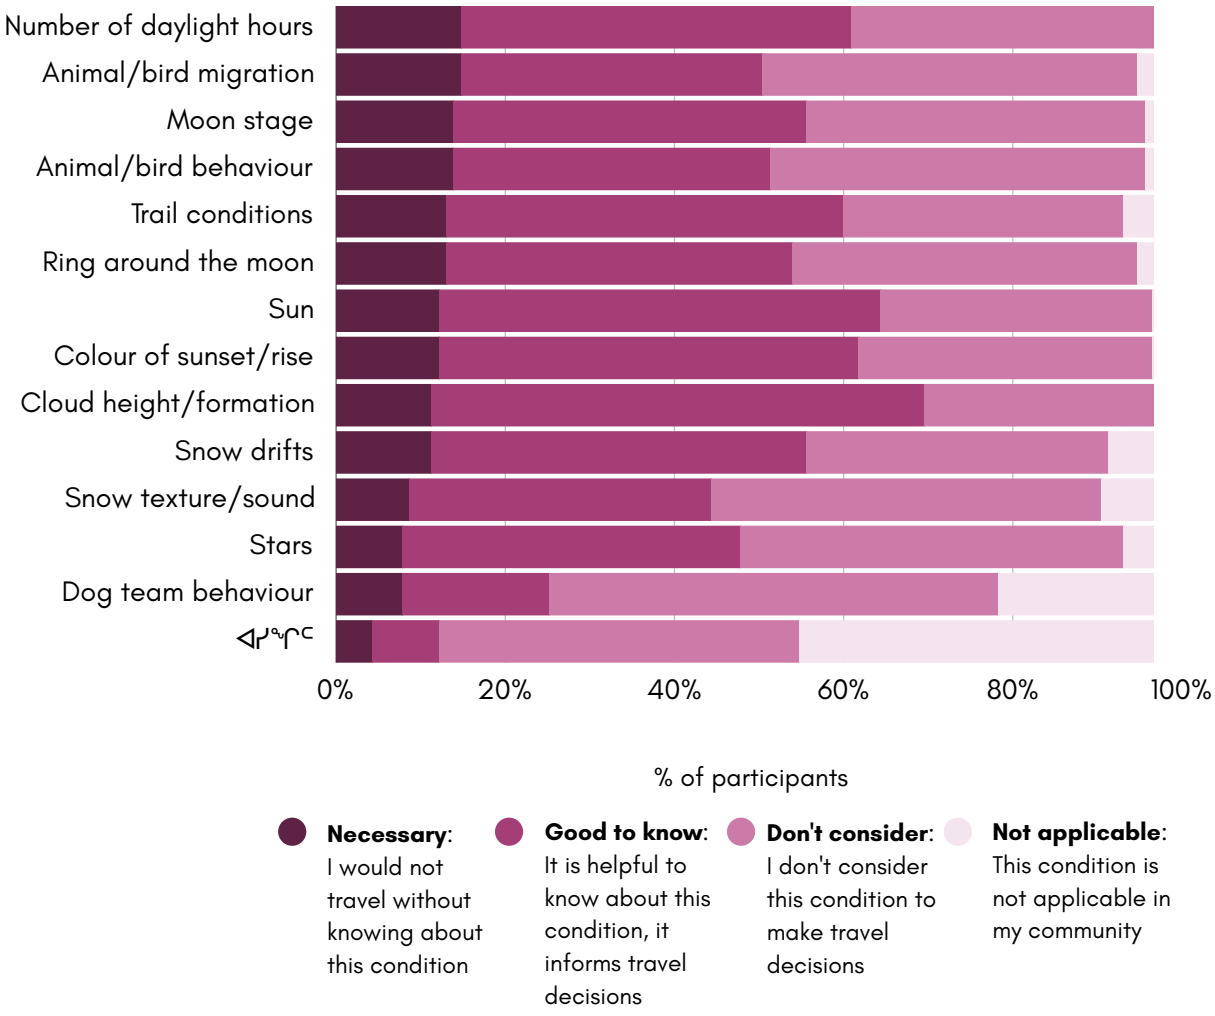
OTHER ENVIRONMENTAL CONDITIONS ARVIARMIUT PARTICIPANTS CHECK BEFORE THEY TRAVEL



OTHER

Arviarmiut participants check many other environmental conditions before they travel on the land. Number of daylight hours, animal/bird migration, moon stage, and animal/bird behaviour are the other environmental conditions most often considered necessary to check before travelling. Those who said "other" said dogs and wildlife move in similar ways.

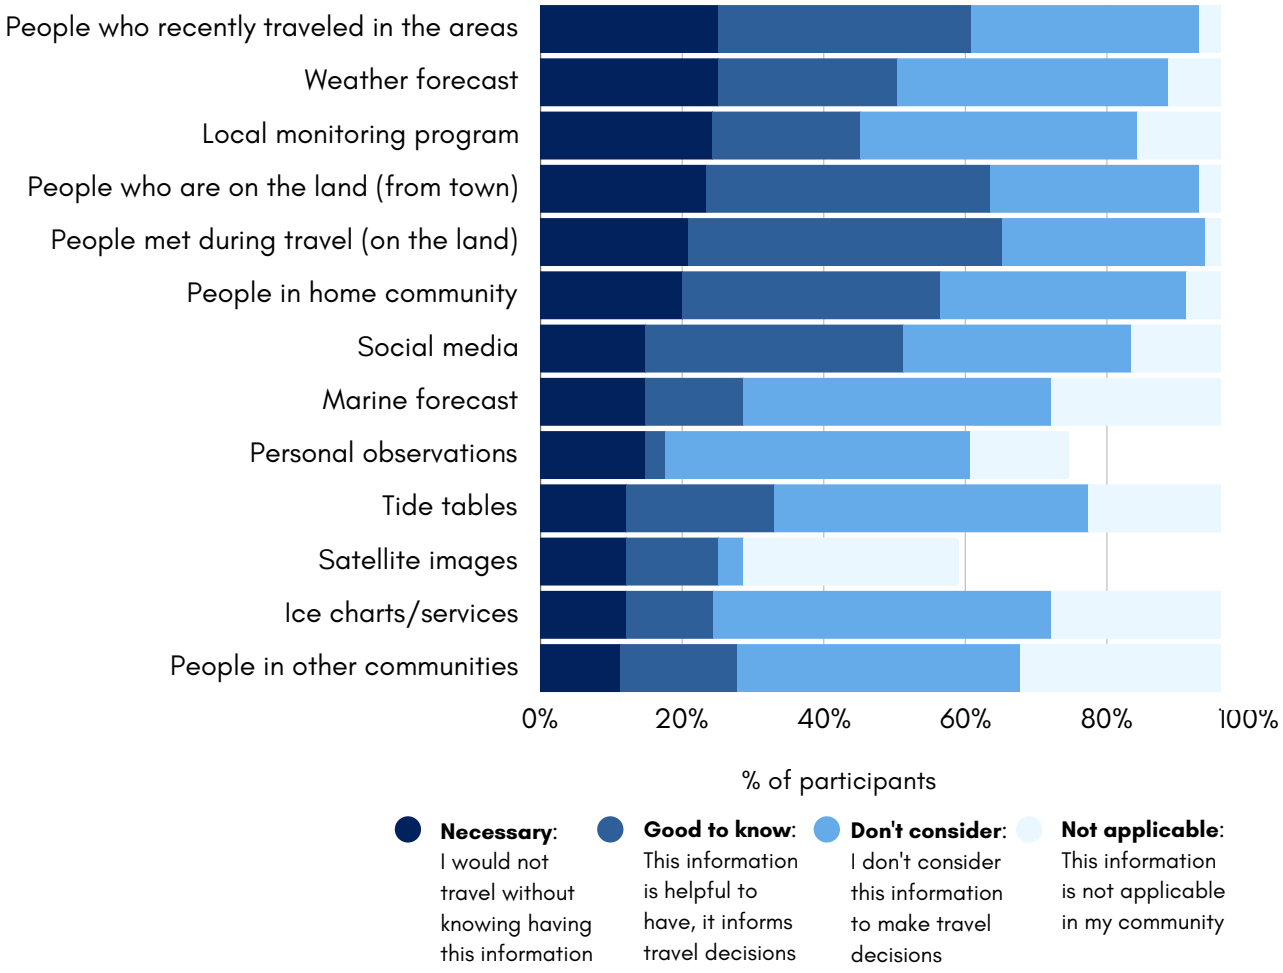
INFORMATION SOURCES ARVIARMIUT PARTICIPANTS USE WHEN PLANNING A TRIP



When planning a trip, Arviarmiut participants access many sources of environmental information before they travel on the land. People who recently travelled in the area, the weather forecast, local monitoring programs, and people who are on the land are information sources that participants most often consider necessary to check before travelling.

While on the land and when deciding to return home talking to people who are on the land, and people met during travel on the land are the information sources that are used most by Arviarmiut.

CONTACTING OTHERS FOR HELP

76%

If Arviarmiut participants get stranded or have an accident on the land, 76% (out of a total of 115) can call for help.

Of the 87 respondents who can call for help, most would call a **family member** (91%), or **local search and rescue** (56%), and some would call a **friend** (45%) for help.

Respondents would also call **Hunters and Trappers Association** (26%) and **Nunavut Emergency Management** (2%).

Of the respondents who can call for help, most use a cell phone (66%). They also use short-wave radios, InReach or SPOT, or satellite phones. Respondents who answered "Other" pray, and get help when other hunters approach them.

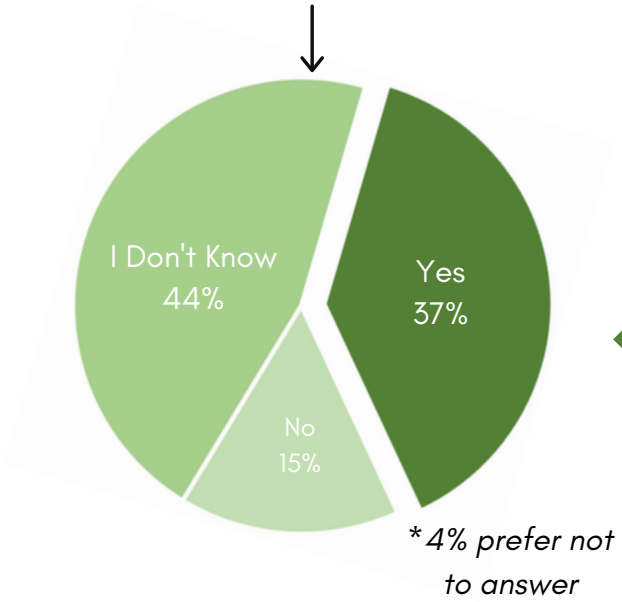
GATHERING TO TALK ABOUT TRAVEL CONDITIONS WITH OTHERS IN ARVIAT

Are there places in Arviat where people tend to meet and talk about recent travel conditions?



*4% prefer not to answer

Of the 43 respondents who answered "yes there are places"

86%
go to these places to listen or ask for advice

86%
go to share observations or advice

Just less than half (44%) of participants said they did not know if there are places in Arviat where people tend to meet and talk about recent travel conditions, or weather, water, ice and other environmental conditions. Of the 37% (43 participants) who said there are places where people meet, most (86%) go to those places to listen or ask for advice or to share observations or advice.

PLACES ARVIARMIUT GATHER TO TALK ABOUT TRAVEL CONDITIONS

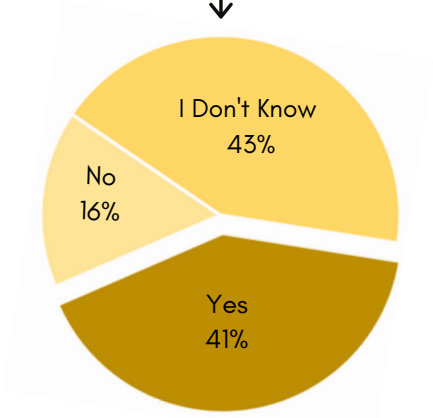
SOCIAL MEDIA ARVIARMIUT USE TO SHARE TRAVEL CONDITIONS

Do Arviarmiut use social media to talk about travel conditions?



Of the 47 respondents who said "yes"

30 (64%)

use the information shared over social media

There were 47 Arviarmiut participants who identified being aware of social media pages or groups where people share observations or advice about weather, water, and ice conditions mentioned using Facebook.

It is important to note that some respondents have their own knowledge of the weather, water, ice, and snow conditions so they do not check social media for this information.

Commonly used social media

Facebook
- Aqqiumavvik Society
- Arviat - everything and anything
- Family and friends
- Arviat Young Hunters
- Nunavut Hunting stories of the day

SIKU app (including for SmartICE)

Topics, descriptions, and photos include

- Cautions for safe travel
- Hunting, trapping, and fishing
- Land and survival skills
- Melting snow and ice
- Rivers
- Safe and dangerous areas
- Sea depth
- Sea ice thickness
- Weather and water conditions
- Wildlife, wildlife harvested

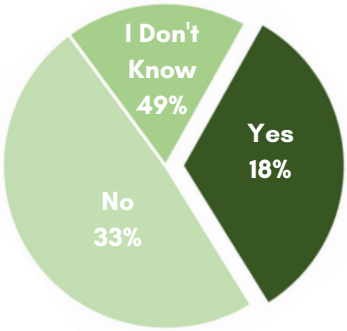
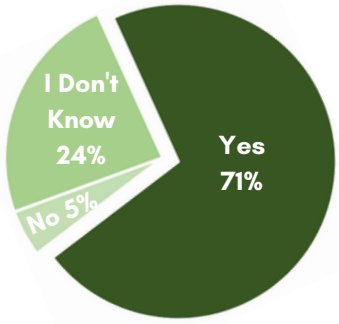
COMMUNITY MONITORING PROGRAMS

Are there local weather stations in Arviat?



Is the local weather station information available to the community?



Do you use the local weather station information?

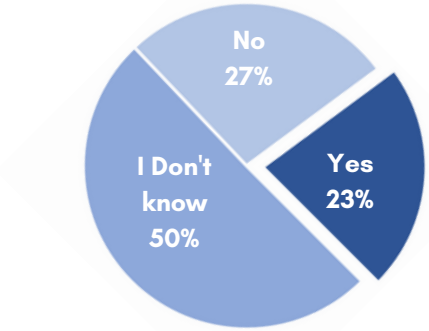
Of 15 respondents who answered "yes the info. is available to the community"

14 (93%)

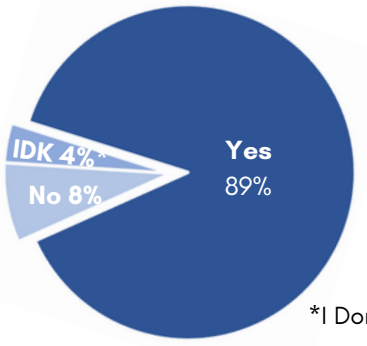
use the local weather station information

When asked about local weather stations, it is notable that 56 participants said that they do not know if there are local weather stations and 59 participants said that local weather stations do or do not exist.
Of the 21 participants who said there are local weather stations in Arviat, 15 of them said the weather station information is available in Arviat and 14 of them said that they use the information.

Are there local water/ice monitoring programs in Arviat?



Is the water/ice monitoring information available to the community?



*I Don't Know

Do you use the local water/ice information?

Of 23 respondents who answered "yes the info. is available to the community"

19 (83%)

use the local water/ice information

When asked about local water and ice monitoring programs it is notable that the same number of participants said that they do not know if there are local water and ice monitoring programs as said that local programs do or do not exist. There were 26 participants who said there are local water/ice monitoring programs. Of these, 23 respondents said the information is available in Arviat and 19 respondents said that they use the information.

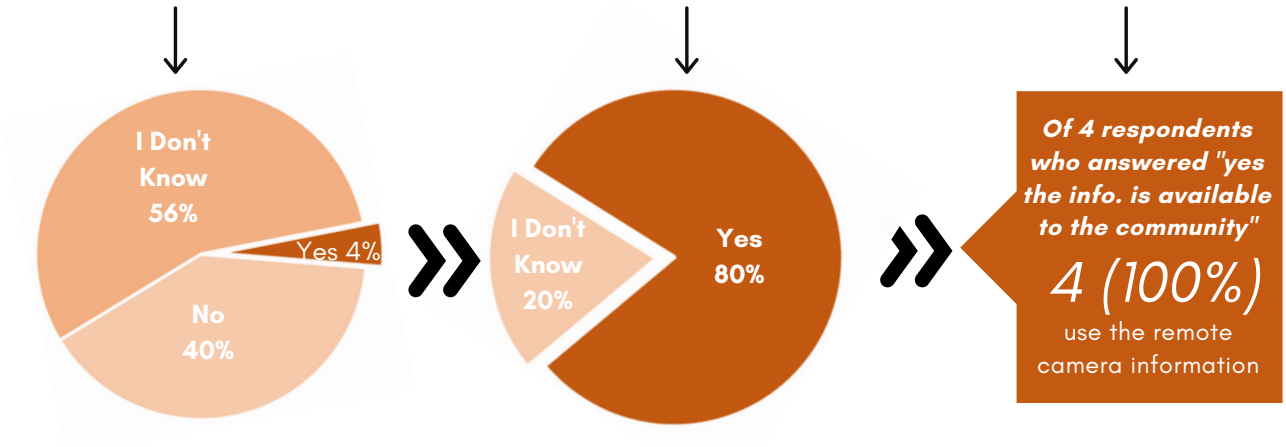
COMMUNITY MONITORING PROGRAMS (CONTINUED)

Are there remote cameras recording environmental conditions in Arviat?

Is the remote camera information available to the community?

Do you use the remote camera information?



Remote cameras are cameras placed in areas where a photographer cannot be at the camera to take photos. Remote cameras often have a self-timer built into the camera so photos can be taken at specific times. An example is a remote camera mounted somewhere near a floe edge, with a built-in timer that is set to take a photo at noon each day.

When asked about remote cameras, it is notable that more participants said that they do not know if there are remote cameras than said that remote cameras do or do not exist. Of the 5 participants who said there are remote cameras, 4 said the remote camera information is available in Arviat, and all fof them said they use the remote camera information.

Aqqiumavvik Society is a partner in this project, and through them we know there are local monitoring programs in Arviat, including SIKU and SmartICE. However, survey responses suggest that community members are not widely aware of these programs, or they did not associate them with the way the questions were asked in the survey.

PRODUCTS AND ACCESSING ENVIRONMENTAL FORECASTS (CONTINUED)

Of the forecasting products used, respondents most often rely on weather forecasts, followed by tide tables, and the other services are less often used.

Of the 61% of participants who use **weather forecasts**, 36% experienced challenges when accessing them. **Tide tables** were used by 37% of participants and of these, 21% experienced challenges.
Ice services were used by 30% of participants and of these, 30% experience challenges when accessing them. **Satellite images** were used by 29% of participants, 21% of whom experience challenges when accessing them. Of the 23% of participants who use **marine forecasts**, 19% experienced challenges when accessing them.

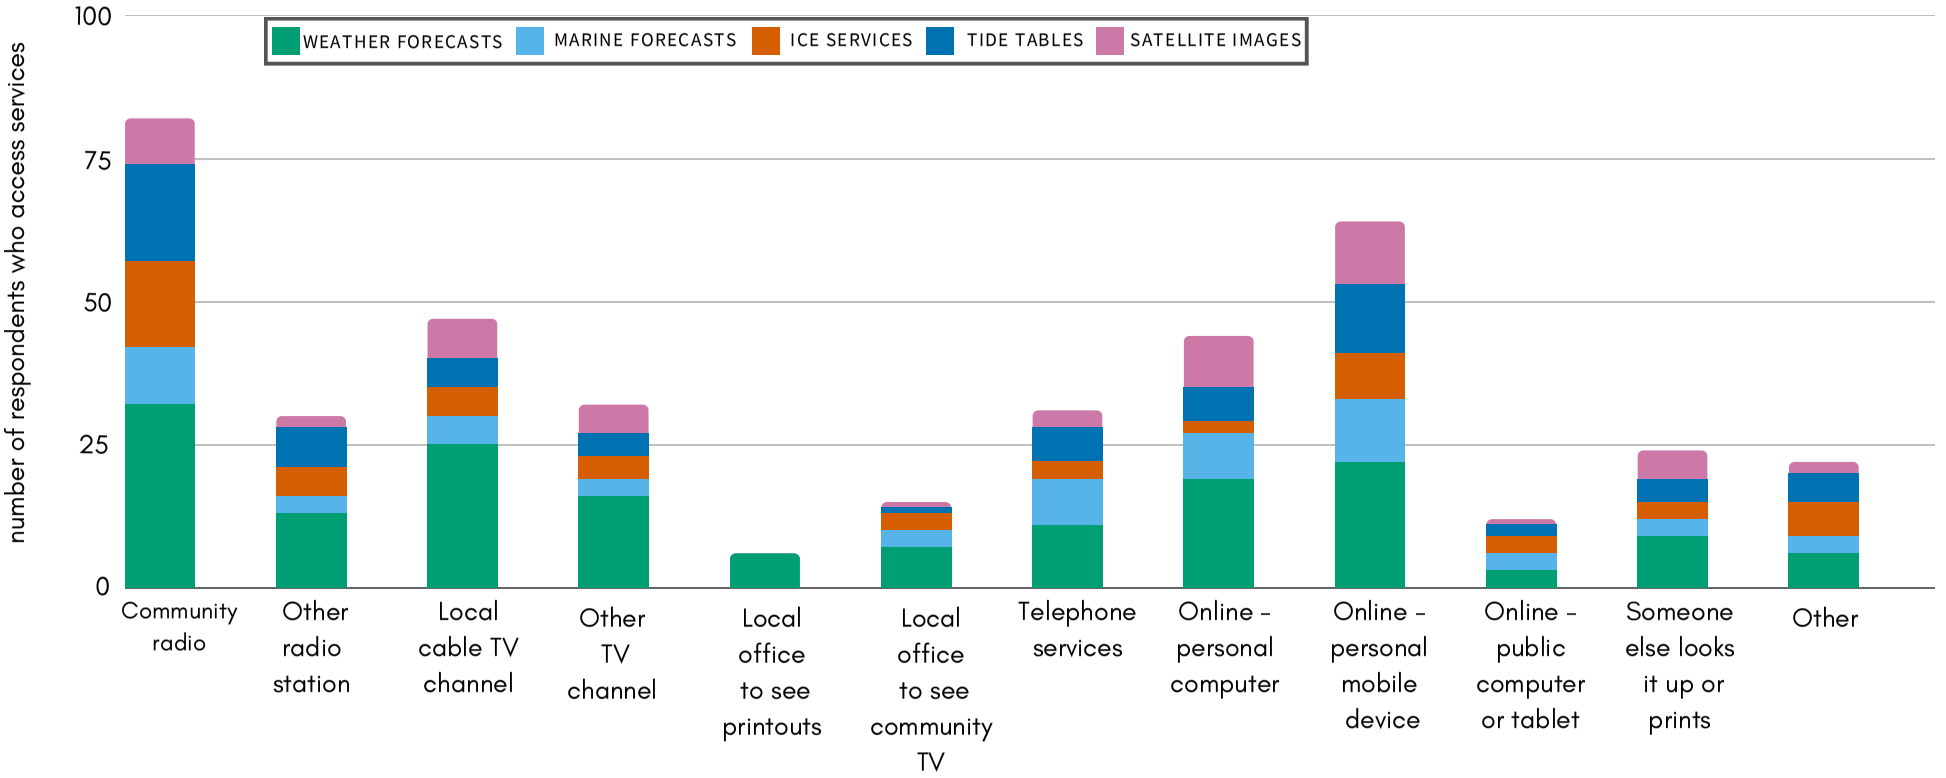
WAYS THAT ARVIARMIUT RESPONDENTS ACCESS POLAR SERVICES



Arviarmiut respondents access environmental forecast products in a range of ways, and mostly by listening to community radio, going online using a personal mobile device or personal computer, or watching a local cable TV channel. Those who said "Other" access the weather forecast by talking to Aqqiumavvik Society staff, and access marine forecasts, ice services, and tide tables by listening to CB radio.

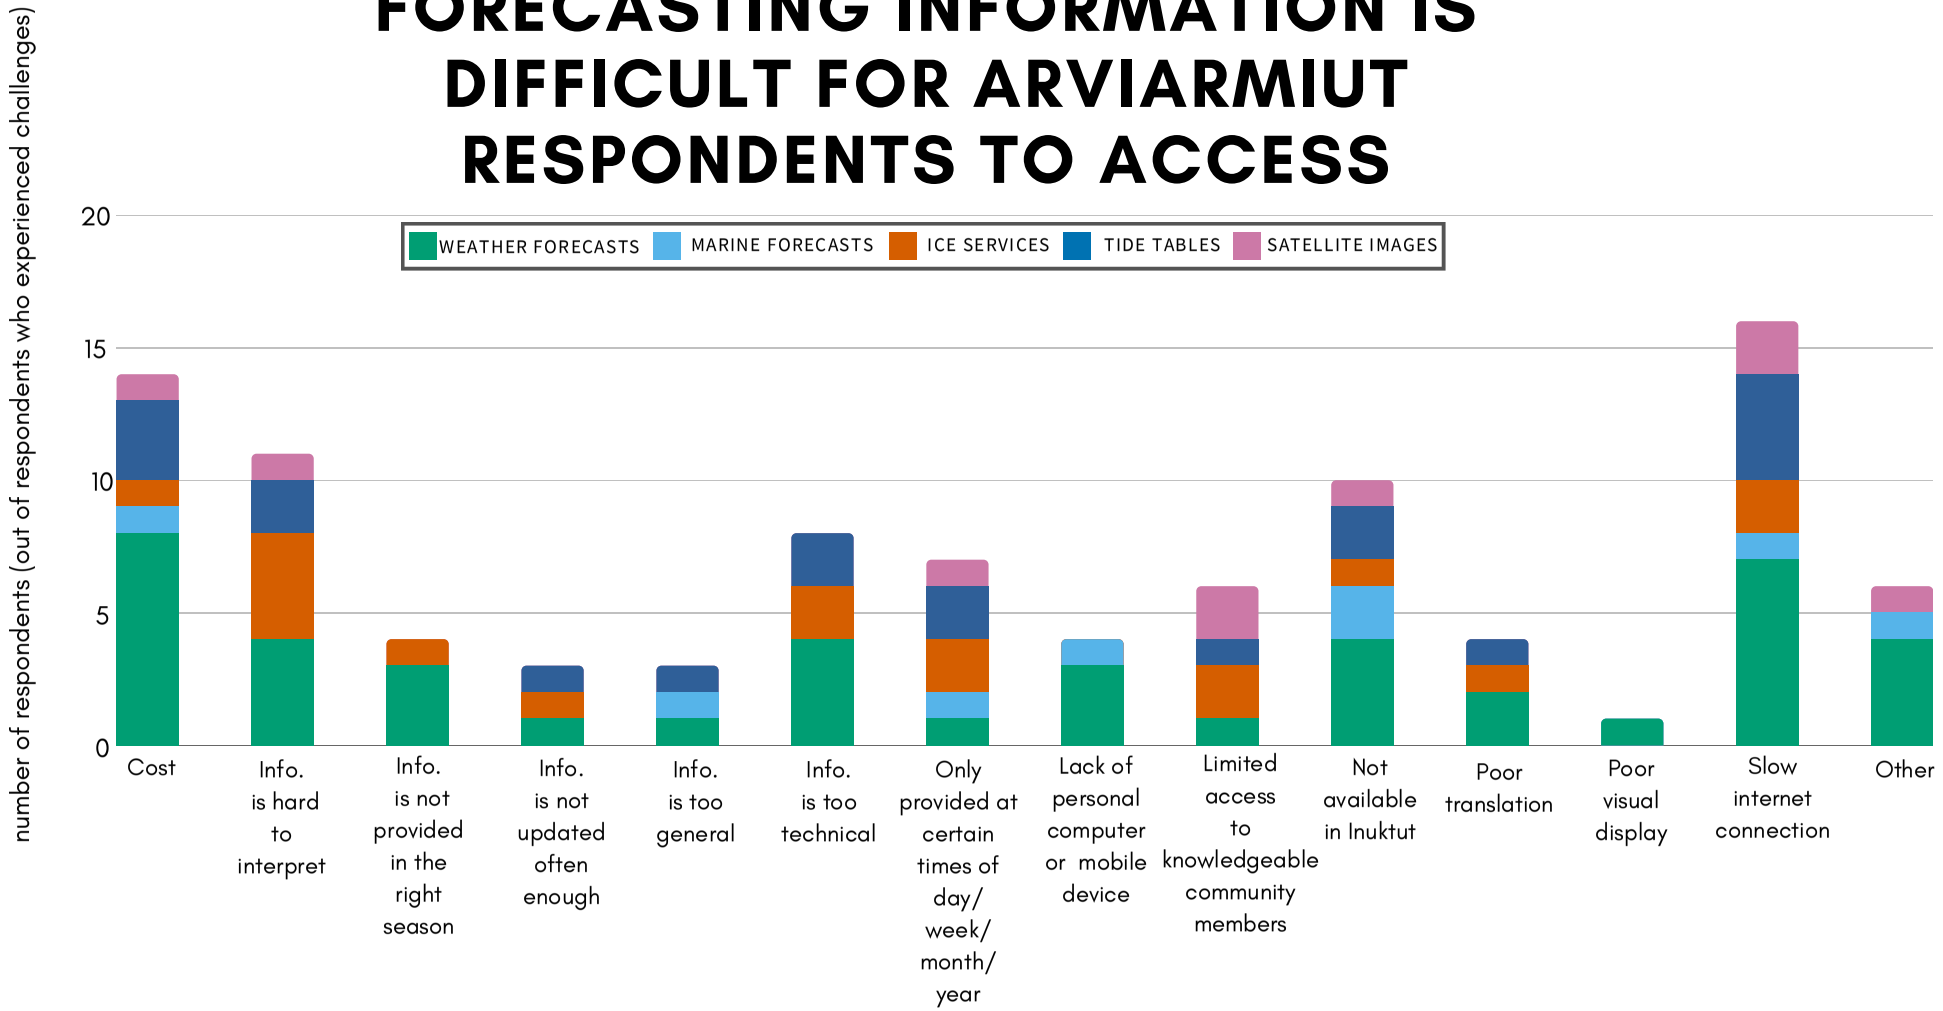
REASONS WHY ENVIRONMENTAL FORECASTING INFORMATION IS DIFFICULT FOR ARVIARMIUT RESPONDENTS TO ACCESS



Arviarmiut respondents identified a number of reasons why information is difficult to access. To summarize the main challenges:

- **Cost** creates a challenge for accessing all online products, in particular weather forecasts.
- **Slow internet connection** creates a challenge for accessing all online products, in particular weather forecasts and tide tables.
- **Information that is not available in Inuktut** creates a challenge for accessing all online products. Those who said "Other" have either no cell phone or no internet, which makes it difficult to access environmental products.

These results do not necessarily mean that there are no challenges in other areas.

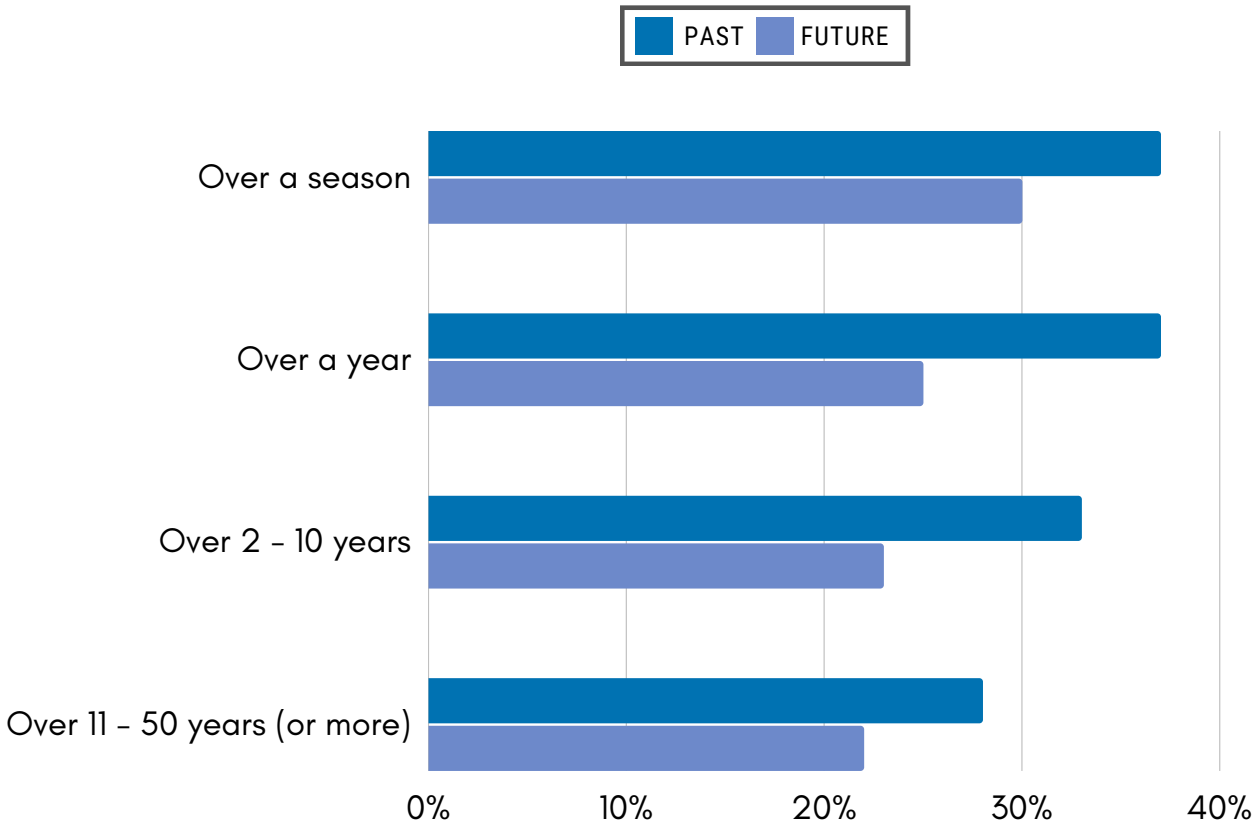
INTEREST IN INFORMATION ABOUT PAST AND FUTURE ENVIRONMENTAL CHANGES



% of participants who said "yes" they are interested in having information about long-term environmental changes

More participants are interested in information about past changes to weather, water or ice conditions (related to climate change) than are interested in forecasting or predictions.

Slightly more participants are interested in information about changes over the past season and past year, than changes over the past 2-10, or 11-50 years or more.

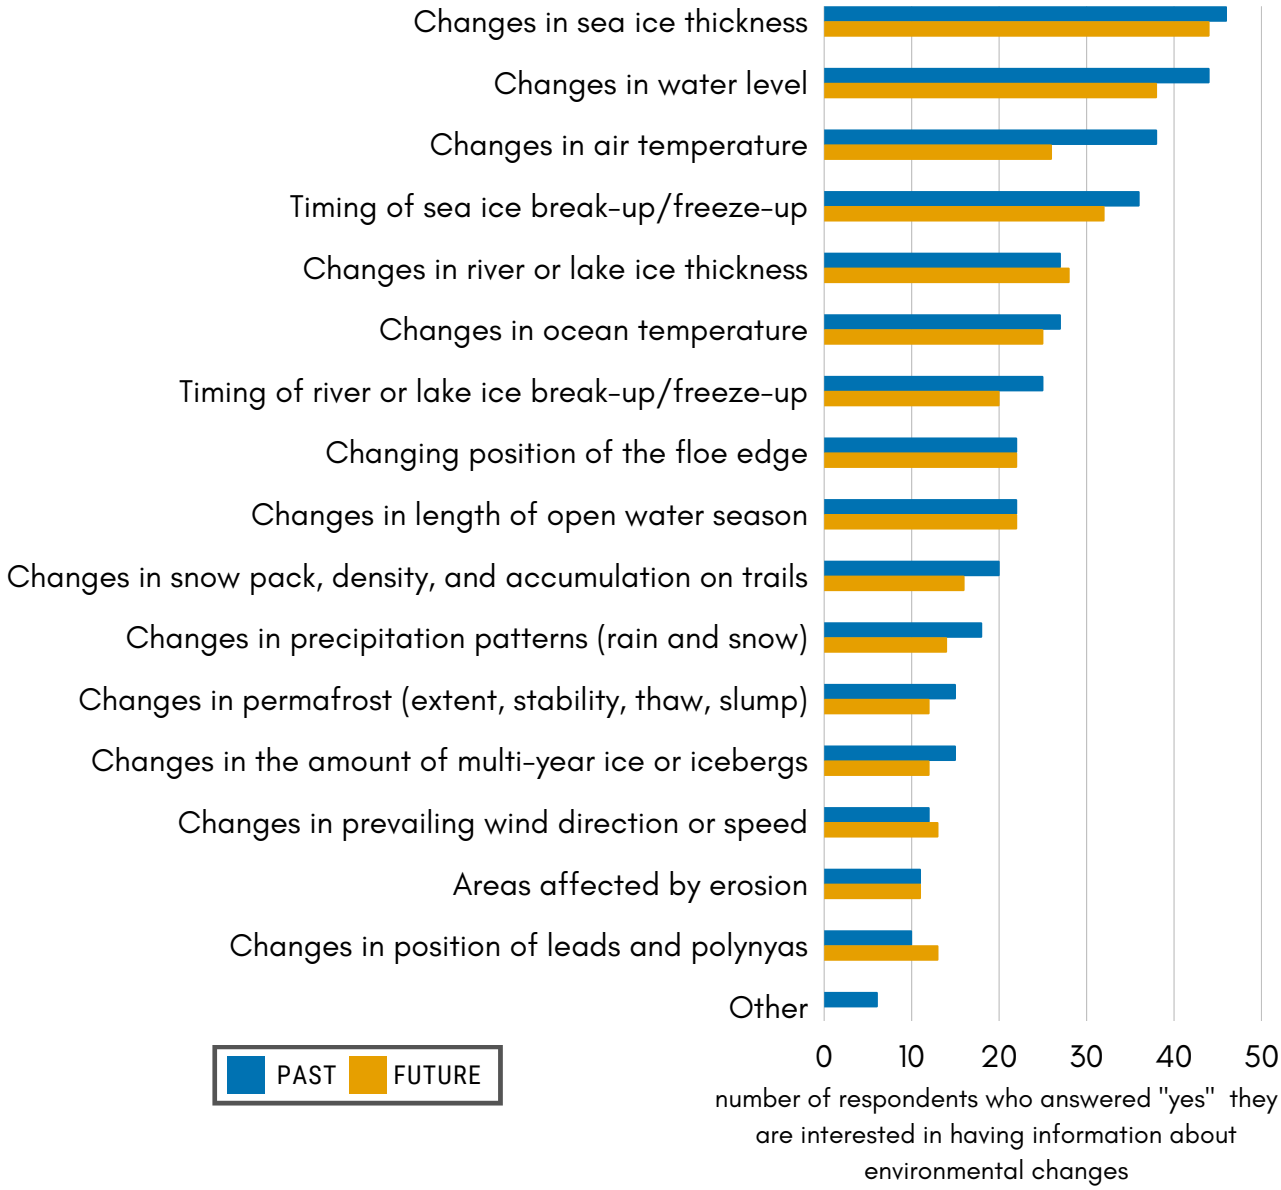
INTEREST IN LONG-TERM ENVIRONMENTAL CHANGES

INFORMATION ABOUT PAST OR FUTURE CHANGES FOR MAKING DECISIONS



More respondents are interested in having information about past environmental changes than about future changes. Common topics of interest included changes in sea ice thickness, changes in water level, changes in air temperature, and timing of sea ice break-up/freeze-up. Respondents who answered "Other" are interested in information about past changes to the land and weather.

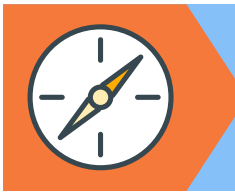
INTEREST IN TRAINING

Respondents who said they were interested in receiving training on survival skills and navigating the land (64 participants), observing and understanding environmental conditions (59 participants), local environmental monitoring programs (51 participants), and accessing or using social media pages or groups (51 participants), were invited to describe the kinds of training they are interested in. Respondents were also asked to share about who they would like to learn from, and environmental conditions they would like to learn more about. The points below were organized by report writers to group them into similar topics.

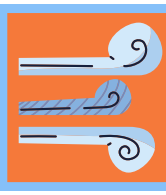


Improving Navigation Skills on the Land

- Learn to not rely on GPS
- Learn land names, place names
- Learning to go out inland
- Maps
- Short cuts on the coast, land, and river crossings nearby Arviat
- Traveling by sea and land
- Learn about the area's land routes for hunting and animal migrations
- Where people usually go out hunting (taking the right routes and where exactly to go)

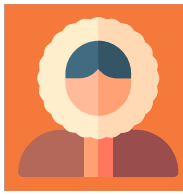
Developing Safety and Survival Skills on the Land

- Arctic survival skills
- First aid
- Boating with buddies
- For first time hunters: information about how to survive on the land or make igloos
- Dangerous areas around sea ice and or on the land
- Getting help
- Getting to go out inland alone
- How to adapt to sudden weather changes
- How to prepare, or what to get before going out



Increasing Knowledge of Environmental Conditions

- How climate change affects our weather
- Which conditions to observe/read out on the land and how to do it
- Ice, land, water, and sea conditions
- Learn more about environmental skills: how to respect the environment around me
- Rivers and muds
- Weather conditions, monitoring, forecasting, and (new) skills



Connecting to Local Programs and Services

- Aqqiumavvik Society, Young Hunters Program
- Learn from Elders who are experienced in the land
- Hunting programs about the environment and which area has more animals, ice conditions etc.

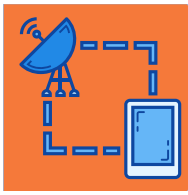
INTEREST IN TRAINING (CONTINUED)



Gaining Familiarity with Technology

- Compasses, co-ordinates, and maps
- New technology
- Online marine and weather forecasts
- Proper set up of a Humminbird (fish finder)
- SmartICE
- Social media
- GPS, inReach, and SPOT
- SIKU app
- How to read degrees and Celsius

Strengthening Hunting and Inuit Cultural Practices and Skills

- Learn from Elders and experienced hunters:
  - who know the land, weather and where the good, fresh water is
  - who help people in the community
  - who learned from observing and from new technology and past records of lands conditions
- Learn about:
  - land skills
  - animals, where animals are, how to skin animals (aktuq)
  - traditional sewing and making
  - fishing and hunting caribou
  - how to make dried meat (nipku)
  - how to shoot a gun so I know to protect myself on the land
  - about guns and bullets
  - hunting and trapping
  - how to do seal skin and caribou meat
  - reading weather and ice conditions
  - repairing skidoos and Hondas
  - sewing for kids, hunting clothes, winter clothes
  - travel routes and place names
